Transform

**Language**

Enter a JSON Query function to filter, sort, or transform the data. You can use functions like `get`, `filter`, `sort`, `pick`, `groupBy`, `uniq`, etcetera. Example query: `filter(.age >= 18)`

**Path**

```
(document root)
```

**Wizard**

(Only available for arrays, not for objects)

**Query**

**Original**

```
{
  _links : {
    self : [ 1 item
      0 : {
        href : http://localhost/wpapi/wp-json/wp/v2/pages/2
        targetHints : {
          allow : [ 1 item
            0 : GET
          ]
        }
      }
    ]
    collection : [ 1 item
```

**Preview**

```
        name : wp
        href : https://api.w.org/{rel}
        templated : true
      }
    ]
  }
  author : 1
  class_list : [ 5 items
    0 : post-2
    1 : page
    2 : type-page
    3 : status-publish
    4 : hentry
```

Transform

localhost/wpapi/wp-json/wp/v2/pages/2

text tree table

```
{
